

CCB International RMB Fund Series

CCB International - RMB Fixed Income Fund

Risk Disclosure

CCB International - RMB Fixed Income Fund (a sub-fund of the CCB International RMB fund Series) (the "Fund").

Investment Risk

· The Sub-Fund's investment portfolio may fall in value due to any of the key risk factors below and therefore your investment in the Sub-Fund may suffer loss. There is no guarantee of the repayment of principal.

China Market Risk

· The Sub-Fund's investments are concentrated in mainland China. The value of the Sub-Fund may be more volatile than that of a fund having a more diverse portfolio of investments.

· The value of the Sub-Fund may be more susceptible to adverse economic, political, policy, foreign exchange, liquidity, tax, legal or regulatory event affecting the mainland China market.

RMB Currency Risk

· RMB is currently not freely convertible and is subject to exchange controls and restrictions.

· Non-RMB based investors are exposed to foreign exchange risk and there is no guarantee that the value of RMB against the investors' base currencies (for example HKD) will not depreciate. Any depreciation of RMB could adversely affect the value of investor's investment in the Sub-Fund. There is no guarantee that RMB will not depreciate.

· Although offshore RMB (CNH) and onshore RMB (CNY) are the same currency, they trade at different rates. Any divergence between CNH and CNY may adversely impact investors.

· Under exceptional circumstances, payment of redemptions and/or dividend payment in RMB may be delayed due to the exchange controls and restrictions applicable to RMB.

Risk associated with debt securities rated below investment grade or unrated

· The Sub-Fund may invest in debt securities rated below investment grade (in the case where the credit rating is designated/assigned by an internationally recognized credit agency (i.e. Moody's, Standard and Poor's and/or Fitch, and such agencies' respective below investment grade threshold rating i.e. Baa3, BBB- and BBB-) or rated BB+ or below by a Mainland credit rating agency (in the case the credit rating is designated/assigned by a PRC credit rating agency) or unrated. Such securities are generally subject to lower liquidity, higher volatility and greater risk of loss of principal and interest than high-rated debt securities.

Credit Risk of Counterparties

· The Sub-Fund is exposed to the credit/insolvency risk of issuers of RMB Income Instruments and bank deposits that the Sub-Fund may invest in.

· RMB Income Instruments that the Sub-Fund invests in may or may not be of investment grading. In the event of a default or credit rating downgrading of the issuers of the RMB Income Instruments, the Sub-Fund's value will be adversely affected and investors may suffer substantial loss as a result.

· The RMB Income Instruments that the Sub-Fund invests in may be unrated. These instruments are subject to greater risks because of generally lower credit worthiness and liquidity, greater fluctuation in value and higher chance of default than investment grade debt securities.

Credit Rating Agency Risk

· The credit appraisal system in mainland China and the rating methodologies employed in mainland China may be different from those employed in other markets. Credit ratings given by mainland China rating agencies may therefore not be directly comparable with those given by other international rating agencies.

Valuation Risk

· Valuation of the Sub-Fund's investments may involve uncertainties and judgmental determinations. If such valuation turns out to be incorrect, this may affect the NAV calculation of the Sub-Fund.

Interest Rates Risk

· Investment in the Sub-Fund is subject to interest rate risk. In general, the prices of debt securities rise when interest rates fall, whilst their prices fall when interest rates rise.

Risk of Limited Pool of Investments

· The quantity of RMB Income Instruments issued inside or outside mainland China that are available to the Sub-Fund may be limited. The Sub-Fund may hold a significant portion of assets in bank deposits if there are not sufficient RMB Income Instruments for the Sub-Fund to invest in. This may adversely affect the Sub-Fund's return and performance.

Liquidity Risk

· For RMB Income Instruments that are currently not listed on a stock exchange or a securities market where trading is conducted on a regular basis, there may not be an active secondary market. The Manager may have to liquidate such investment at a discount to meet redemption requests.

· The bid and offer spread of the price of RMB Income Instruments may be large, so the Sub-Fund may incur significant trading and realisation costs and may suffer losses when selling such investments.

Risks associated with Bond Connect

· Investing in debt securities via Bond Connect is subject to various risks such as volatility risk, market risk, renminbi currency risk, liquidity risk, settlement and counterparty risk as well as other risk factors typically applicable to RMB Income Instruments. The relevant rules and regulations on Bond Connect are subject to change which may have potential retrospective effect. In the event that the relevant PRC authorities suspend account opening of Bond Connect or trading through Bond Connect, the Sub-Fund's ability to invest in the China interbank bond market will be adversely affected. In such event, the Sub-Fund's ability to achieve its investment objective may be negatively affected.

PRC tax risk

· There are risks and uncertainties associated with the current PRC tax rules and practices, the changes to which may have retrospective effect. Any increased tax liabilities on the Sub-Fund may adversely affect the Sub-Fund's value.

· Based on independent and professional tax advice, the Manager will not provide for any PRC withholding tax on the capital gain and interest, realized or unrealized, derived from investments made by the Sub-Fund in the China debt markets. The Manager will review the tax provisions policy of the Sub-Fund, and it may in future change the tax provisions policy, including making provisions to reflect taxes payable when considered appropriate. Investors should note this may have a substantial negative impact on the NAV of the Sub-Fund.
